Introduction

Just What Is Blogging and Pinging???

There is a new duo in town called Blogging and Pinging. It is not a new comedy team or even a singing group, but a new way to attract visitors to your website and make more money. Blogging and Pinging is a marketing tool that can make anyone a viable website owner.

Let's start with a definition of a blog.

Blog is short for weblog. A weblog is a journal that is frequently updated and intended for general public consumption. Blogs generally represent the personality of the author or the Web site.

Ok, so what about pinging? Originally, a ping was a program that bounced a request off of another computer/server over a network or the Internet to see if the remote computer was responding. That same program is now used as a method of informing others that your blog exists and also let's them know when a new post has been made.

When you put the two together – blogging and pinging – you get a technique that is extremely effective at getting ANY web site, no matter how big or small, indexed by the major search engines.

Why Is Blogging and Pinging The Newest Marketing Tool?

Most of you are now saying, “Yea, so?? I can get my site indexed now. What’s the big deal?” The big deal is that blogging and pinging gets your site indexed almost immediately AND it is FREE!!!

If you have any experience trying to get a site indexed and listed in the major search engines, then you know that it is frustrating and very difficult to get done in a reasonable amount of time. After working hard to get your site together, collecting and writing content, worrying about keywords and keyword densities, you are not even close to finished. Now comes the even harder part! Now you have to submit, by hand, your site to all the major search engines. And finally, you get to wait.

That’s right, you have to wait for the spiders to come index your site. This could take weeks or this could take months. There are some methods that will help bring along the spiders a bit faster, but these take lots of time and effort and money. And still, you can’t be sure that the spiders will come fast enough.

Blogging and pinging solves this problem. You can guarantee that spiders will come to your site and that you will get listed in all the major search engines with minimal effort and no money – in about 48 hours!!!

How does it work? The largest search engine, Google, owns Blogger.com. This is the site we will use to help you create your blogs. Google sends their search engine spiders through Blogger.com to find new content.

When you blog the content on your site – an extremely easy process described in Chapter 5 – the URL of the page you are blogging is automatically attached. That way, when Google’s spiders come along, they “see” the URL. If that URL isn’t listed in the Google database, the spiders “run right over” to the URL and check it out!

Imagine that the URL found on the blog is YOUR site! Rather than wait for weeks, months, or even up to a year, you can get YOUR site listed immediately! Google themselves will tell you that they would rather “discover” new URL’s by finding links than get them via submission. So, why not blog and ping and give them what they want!!

Another good piece of news is that once Google has your site, other search engines that use Google’s feed will put you on their site, too. And it all happens at lightening speed!

Another technique you will learn here in Chapter 3 and Chapter 4 is how to get Yahoo to send their news spiders your way. Just like Google, Yahoo is looking for fresh content. And once they pick up your site, so will others.

Finally, Chapter 7 will show you how to ping other services like Technorati and blo.gs. So why would you want to be on these sites? One word: **traffic**. Services like Technorati spider your links in real time. If you show up on someone's Technorati link list for their site they're likely to visit your site to see what you said, increasing your exposure.

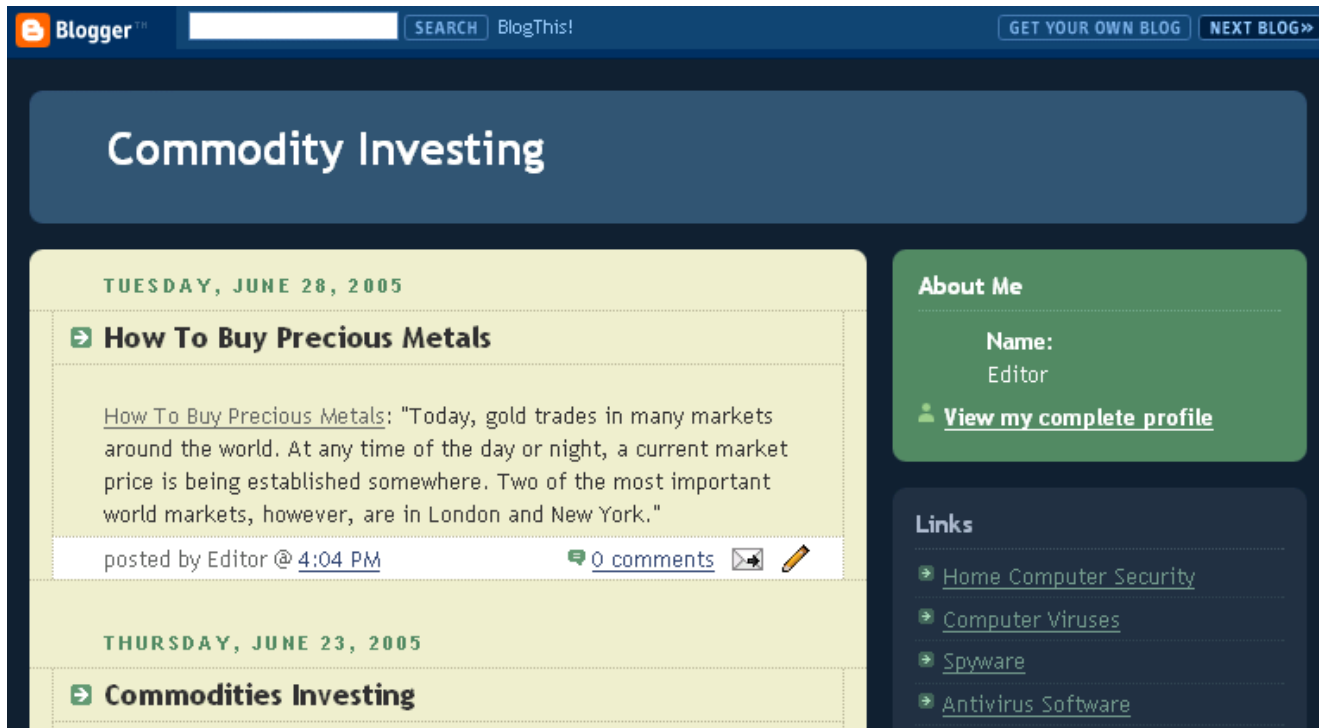

What Do The Spiders See?

We've talked a lot about spiders and pinging, but just what do spiders see when they come to your site?

Unlike "human" visitors, spiders are looking for links. In fact, they are not looking at your site at all – they are just scanning through your HTML code!

Let's take a quick look at what a spider sees when it goes to your blog.

Here is a blog about Commodity Investing. As a human visitor, you would see the following:

However, the spider is looking below the surface and scanning to find HTML links.

When the spider crawls your content, it will see the following:

The HTML in the Link field as well as the HTML in the content field will be noted by the spider,

But that is not all! The spider is also looking at the rest of your blog and checking out the HTML in the template:

```
<dl id="comments-block">
  <BlogItemComments>
    <dt class="comment-data" id="c<{$BlogCommentNumber$}"><a name="c<{$BlogCommentNumber$}"></a>
      At <a href="#c<{$BlogCommentNumber$}" title="comment permalink"><{$BlogCommentDateTime$}</a>,
      <{$BlogCommentAuthor$> said...
    </dt>
    <dd class="comment-body">
      <p><{$BlogCommentBody$}</p>
      <{$BlogCommentDeleteIcon$>
    </dd>
  </BlogItemComments>
</dl>

  <p class="comment-timestamp">
<{$BlogItemCreate$>
</p>
```

So, keep in mind, that for the blogging and ping method to work, you have to optimize the blog for spiders. And that is exactly what you are going to learn to do – see like a spider!

Simple Steps Lead to Big Results

As with other marketing strategies, you will need to do some work. However, the steps you will follow to blog and ping are easy and guaranteed to work. Once the system is set up, you can blog and ping to get any of your sites listed quickly.

This ebook will show you how to accomplish each step. The steps will be presented in words and with screen shots. Nothing will be left to chance. And since we've done all the research, you will know exactly what to do and when to do it. Keep in mind that you need to do EVERY step and do them in the proper order. If you don't, then the system simply won't work.

Now you know why blogging and pinging is an essential tool. So, let's get started!

Chapter 1: Creating Your Blog

Step1: Go To Blogger.com

Blogger.com is owned by Google.com. It is a free site that will allow you to create your own blog. In fact, you will have the option of creating as many blogs as you like – all for free.

Put the following URL into your web browser: <http://www.blogger.com>

When you do, you will see the following screen. From this screen, there are three things you can do. You can sign in (which will be an option once you've created an account), you can take a quick tour (which won't be necessary if you read the remainder of this chapter, although can be helpful to some learning styles), or you can create your own blog now.

Click on the orange arrow that says, "Create Your Blog Now"

Already have an account? Sign in:

Username: Password: (?)

Remember me (?)

SIGN IN

What's a **blog**? **TAKE A QUICK TOUR**

Publish thoughts **Get** feedback **Find** people **And** more...

A **blog** is your easy-to-use web site, where you can quickly post thoughts, interact with people, and more. All for **FREE**.

Create a blog in 3 easy steps:

- 1 Create an account
- 2 Name your blog
- 3 Choose a template

CREATE YOUR BLOG NOW

Step 2: Create an Account

For this step, you will need to create a user name and password. It does not matter what user name you choose.

You will also be asked what display name you wish to use. When you post to your blog, this name will be displayed at the end of each post. For now, go ahead and put “editor.” Later, in Chapter 9, you will learn how to change this for each blog if you wish.

Finally, you will need to type in your email address (make sure it is a real address) and check the area that says you agree to their Terms of Service. We have included the Google's entire Terms of Service in our Appendix.

1 Create an account

Choose a user name	<input type="text" value="sampleblogandping"/>	You'll use this to sign in for future visits.
Enter a password	<input type="password" value="*****"/>	Must be at least 6 characters long.
Retype password	<input type="password" value="*****"/>	Enter it again just to be sure.
Display name	<input type="text" value="Editor"/>	The name used to sign your blog posts.
Email address	<input type="text" value="blogandping@hotmail.co"/>	We will never share your address with third parties without your permission.
Acceptance of Terms	<input checked="" type="checkbox"/> I accept the Terms of Service	Indicate that you have read and understand Blogger's Terms of Service

Once you have entered the information, click on the orange "Continue" arrow.

Step 3: Naming Your Blog

Now you will get to name your blog. The first area is the Blog Title of your blog. In this example, the blog title is Kidney Stones. That means, the title at the top of the blog will

say Kidney Stones. Later, we will show you how to optimize your Blog Title for search engines. The Blog Title can be changed at any time.

Next you will be asked to create a blog address or URL. Notice that the URL does not have the traditional www at the front. Picking a blog address can be a bit tricky. If you want to keyword optimize your URL for AdSense or other marketing purposes, you will want to read Chapter 8 to find out how to pick a good name.

Before clicking on the orange “Continue” arrow, you will be asked to type in the characters you see in the picture below. This makes sure that you are a person and not an autobot creating the blog.

2 Name your blog

Blog title	<input type="text" value="Kidney Stones"/>	Enter a title for your blog.
Blog address (URL)	<input type="text" value="http://kidney-stones.blogspot.com"/>	You and others will use this to read and link to your blog.

Word Verification

Type the characters you see in the picture below.

OR

Advanced Setup

Want to host your blog somewhere else? Try [Advanced Blog Setup](#). This will allow you to host your blog somewhere other than Blogspot.

There is one other issue with picking a blog name – the name you want may already be in use. If it is, you will see the following page after clicking continue:

1 CREATE ACCOUNT ▶ 2 NAME BLOG ▶ 3 CHOOSE TEMPLATE

2 Name your blog

Blog title	?	Blog and Ping	Enter a title for your blog.
Blog address (URL)	?	http://blogandping.blogspot.com	You and others will use this to read and link to your blog.
		⚠ Sorry, this blog address is not available	

OR

Advanced Setup Want to host your blog somewhere else? Try [Advanced Blog Setup](#). This will allow you to host your blog somewhere other than Blogspot.

CONTINUE →

At this point, you simply choose a different blog address.

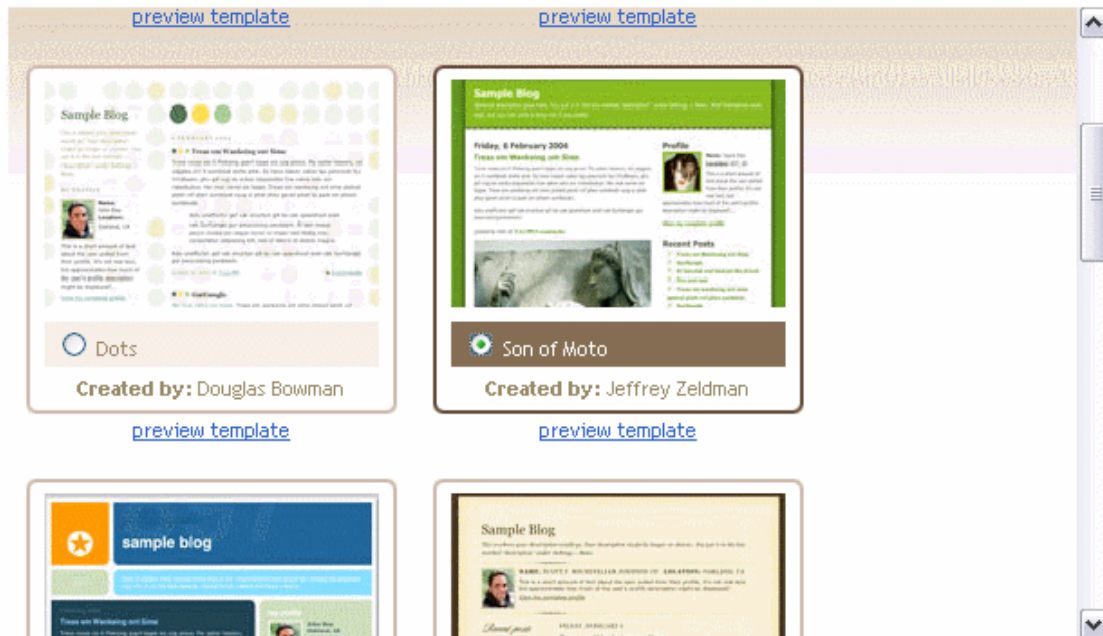

In the sample above, you might want to try blog-and-ping using the dashes, try reversing the name to pingandblog or ping-and-blog, try bloggingandping or blogging-and-pinging, or any other number of variations.

Once you find a URL that is not taken, you can move on to Step 4.

Step 4: Choosing a Template

Blogger currently has 12 ready-made templates to choose from. It really does not matter which template you choose. Each one will allow you to blog and ping. In the following screen shot, “Son of Moto” has been picked.

3 Choose a **template**

After choosing your template, click on the orange “Continue” arrow. As long as you have followed these steps correctly, you will be taken to a screen that let’s you know that your blog has been created. Simply click on the orange “Start Posting” arrow.

 **Your blog has been created!**

We've just created a blog for you. You can now add your posts to it, create your personal profile, or customize how your blog looks.

 START POSTING

Step 5: Creating a Test Post

In order for the rest of the steps to work properly, you will need to have some content on your blog. Adding content will allow you to create a Yahoo RSS feed in Chapter 4.

The content does not have to be relevant and is easy to add.

- Under “Title” add the word Test.
- There is no need to add anything to the “Link” field.
- In the body of the post, once again, add the word Test.

Then you click on the orange “Publish Post” button.

The screenshot shows a web interface for a blog titled "Kidney Stones". At the top right, there are links for "Back to Dashboard", "Help", and "Sign Out". Below the header, there are navigation tabs for "Posting", "Settings", "Template", and "View Blog". Under the "Posting" tab, there are buttons for "Create", "Edit posts", and "Status".

The main content area includes a "Title:" field containing the text "Test" and a "Link:" field. To the right of the "Link:" field is a question mark icon. Below these fields are two buttons: "Edit HTML" and "Compose".

A rich text editor toolbar is visible, featuring options for font size (set to "Normal Size"), bold (b), italic (i), text color, background color, bulleted list, numbered list, link, unlink, and a "Preview" button. Below the toolbar is a "Recover post" link and a large text area containing the word "Test".

At the bottom of the editor, there is a footer with keyboard shortcuts: "For keyboard shortcuts, press **Ctrl** with: **B** = Bold, **I** = Italic, **S** = Publish, **D** = Draft [more >](#)".

Below the footer are two sections: "Allow New Comments on This Post" with radio buttons for "Yes" (selected) and "No", and "Change Time & Date" with dropdown menus for "1", "27", "PM", "Jun", "23", and "2005".

At the very bottom, there are two buttons: "Save as Draft" and "Publish Post".

Once you have published the post, you will see a screen that looks like this:

Your blog published successfully. ([Details ...](#))

Files published... 100%

[View Blog](#) (in a new window)

Republish Index Only

Republish Entire Blog

In the example above, if you clicked on “View Blog” you would see that you now have a blog with the URL <http://kidney-stones.blogspot.com>, a title of Kidney Stones, and one post titled “test.” That is all there is to creating your blog – so let’s move on to the important settings you must know to make this system work

Chapter 2 – Making Your Blog Settings Count

Why Settings Matter

Up until this point, you could have created your blog without this ebook, even if you aren't a technical guru. You may have made a few mistakes along the way, but practically speaking, anyone can easily create a blog on Blogger.com.

But, if you were to skip this chapter and try to use the blog and ping method with the standard settings for Blogger.com, you would think that this method of getting spidered did NOT work! And you would be right! The standard settings don't work!!

More importantly, you would not find the settings needed just anywhere. Determining what worked would be a long and difficult trial and error process. Luckily for you, we have already completed that trial and error process and can tell you exactly what you need to do to make your blogging and pinging successful.

Step 1: The Settings Tab

Let's look again, at the successful post screen from the last chapter. Under the blog title, you will see 4 tabs labeled Posting, Settings, Template, and View Blog.

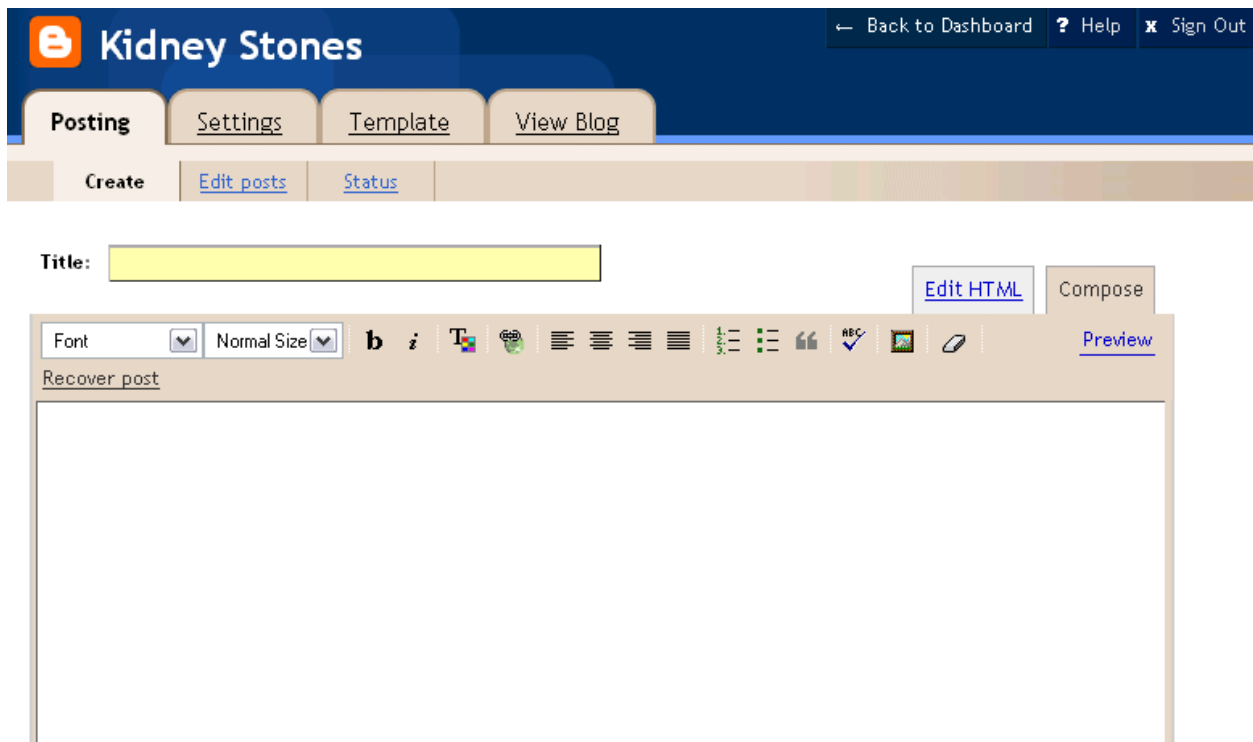

Your blog published successfully. [\(Details ...\)](#)

Files published... 100%

[View Blog \(in a new window\)](#)

If you were in the Posting section, you would also see the same four tabs.

In order to successfully use your new blog for the blog and ping process, you will need to click on and make changes under the “Setting” tab.

Step 2: Settings – Publishing Tab

Once you have clicked the “Settings” tab, you will see settings has 8 sub-tabs. We will only be concerned with 5 of them.

The “Basic” tabs settings are correct. You do not need to make any changes for the blog and ping method to be successful.

Click on the “Publishing” tab. Google automatically shows your BlogSpot address. You will want to save this address to your notepad for future use.

The other piece of information on this page needs to be changed to “Yes.” You definitely want Weblogs.com to be notified whenever you make changes to your blog.

Once you have copied down your URL and made the change to this page, click on the orange “Save Settings”

You're publishing on **blogspot.com**

Switch to: [FTP](#) (publishing on your ISP server) Or [SFTP](#) (secure publishing on your ISP server)

Blog*Spot Address

http:// .blogspot.com
Subject to availability.

Notify Weblogs.com

 Yes

[Weblogs.com](#) is a blog update notification service that many individuals and services use to track blog changes.

[Save Settings](#)

When you do, you will see this page again with the following header at the top:

Settings Were Saved Successfully

You must [Republish](#) your blog to see the changes. (You can also [Republish Index](#) only.)

There is no need to “Republish” your blog at this time. You will republish your blog after you have made all the changes.

Step 3: Settings – Formatting Tab

Now click on the “Formatting” tab to make one change. Towards the bottom is a field called “Show Link Field.” Change that to yes and Save the Settings.

The screenshot shows the WordPress Settings page for the site "Kidney Stones". The "Formatting" tab is selected. The settings are as follows:

- Show**: 7 days on the main page. (If Days is selected, a limit of up to 999 posts will be enforced.)
- Date Header Format**: Thursday, June 23, 2005
- Archive Index Date Format**: June 2005
- Timestamp Format**: 12:59 PM
- Time Zone**: [UTC-08:00] America/Los_Angeles
- Date Language**: English (United States)
- Encoding**: Universal (Unicode UTF-8)
- Convert line breaks**: Yes
- Show Title field**: Yes
- Show Link Field**: Yes

Post Template

Save Settings

Step 4: Settings – Comments Tab

This is one step that you can use but do not have to use. Although it doesn't always happen, if anyone posts a comment to your site, the spiders will see that comment as fresh content.

To allow posts to your blog you will need to make a few changes.

- “Who Can Comment” needs to be changed to anyone.
- “Comment Notification Address” needs to have an email address where you can receive notices that someone has posted a comment to your blog.

Now click on the orange “Save Settings” button.

Kidney Stones [← Back to Dashboard](#) [? Help](#) [x Sign Out](#)

[Posting](#) **Settings** [Template](#) [View Blog](#)

[Basic](#) [Publishing](#) [Formatting](#) **Comments** [Archiving](#) [Site Feed](#) [Email](#) [Members](#)

Comments Show Hide
Note: Selecting "Hide" does not delete existing comments - You can show them at any time by re-selecting "Show".

Who Can Comment?

Default for Posts

Comments Timestamp Format

Show comments in a popup window? Yes No

Show profile images on comments? Yes No

Comment Notification Address
We will email you at this address when someone leaves a comment on your blog.

Save Settings

Step 5: Settings – Archiving Tab

You want your blog to be archived daily. Make this change and click on the orange “Save Settings” button.

The screenshot shows the Blogger dashboard for a blog named "Kidney Stones". The top navigation bar includes "Back to Dashboard", "Help", and "Sign Out". Below this are tabs for "Posting", "Settings", "Template", and "View Blog". Under the "Settings" tab, there are sub-tabs for "Basic", "Publishing", "Formatting", "Comments", "Archiving", "Site Feed", "Email", and "Members". The "Archiving" sub-tab is active, showing the "Archive Frequency" set to "Daily" and "Enable Post Pages?" set to "Yes". A "Save Settings" button is visible at the bottom.

Step 6: Settings – Site Feed Tab

All the settings in this tab are correct. However, you will need to copy the “Site Feed URL” to your notebook for future use. Click on the orange “Save Settings” button.

The screenshot shows the Blogger dashboard for "Kidney Stones" with the "Site Feed" sub-tab selected. The "Publish Site Feed" option is set to "Yes" with a help icon. The "Descriptions" option is set to "Full". Below this, the "Site Feed URL" is displayed as <http://kidney-stones.blogspot.com/atom.xml>.

Step 7: Republish

Once you have saved the settings under the “Site Feed” tab, it is time to republish your blog. You will want to click on the dark blue “Republish” button.

Settings Were Saved Successfully

You must **Republish** your blog to see the changes. (You can also **Republish Index** only.)

When you do, you will get the following screen:

Your blog published successfully. [\(Details ...\)](#)

Files published... 100%

[View Blog](#) (in a new window)

Republish Index Only

Republish Entire Blog

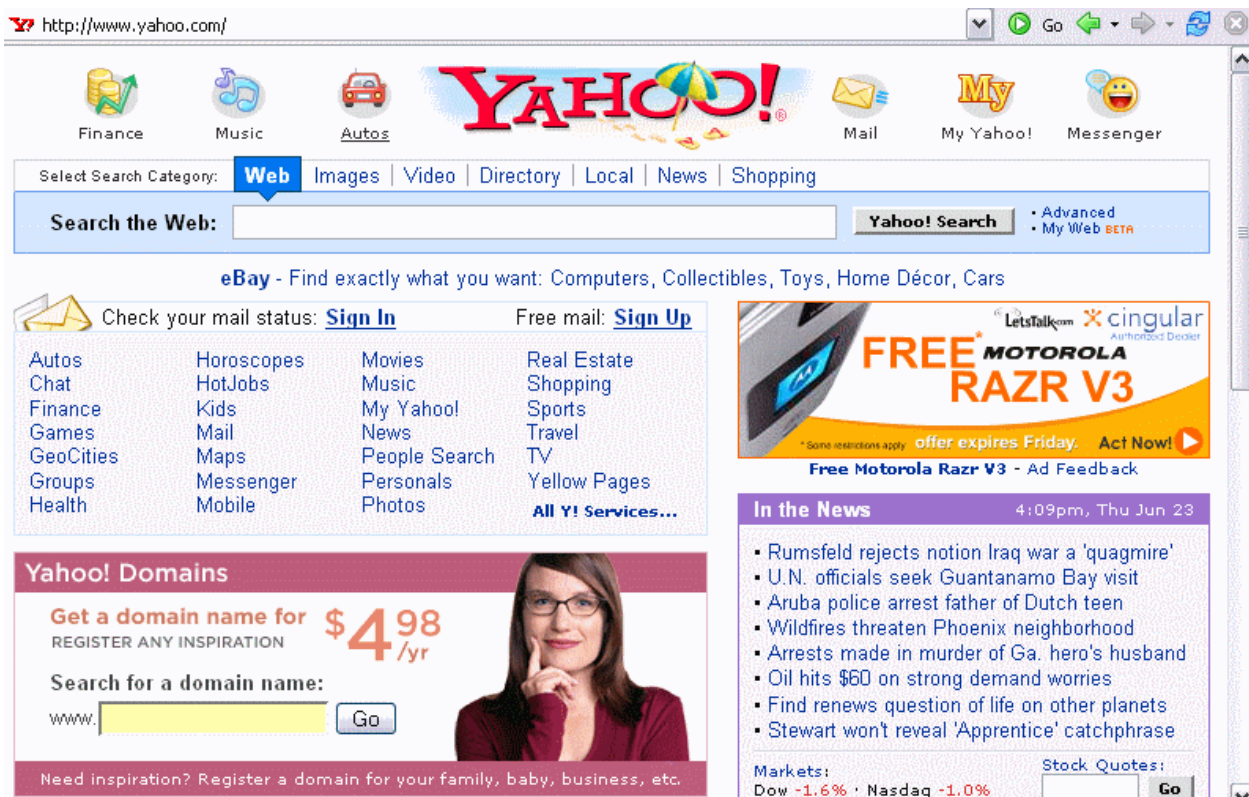

Now you have a blog that is set up for the blog and ping process. The next step is to create a Yahoo account!

Chapter 3: Creating a Yahoo Account

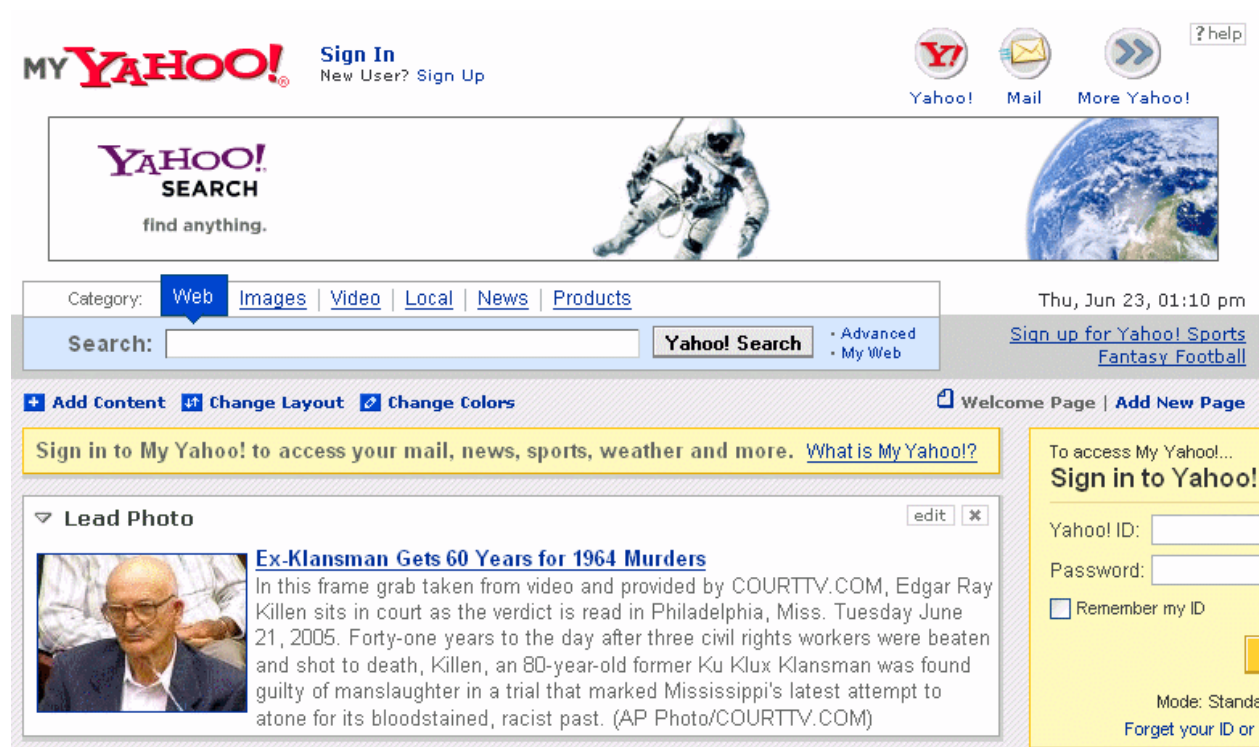

Why A Yahoo Account Is Needed

In the introduction, we told you that Google owns Blogger.com and sends its spiders through Blogger looking for fresh content. We also told you that there was a way to get Yahoo looking at your blog, too. In order to get Yahoo spidering your blog, you will need a yahoo account.

Go to <http://www.yahoo.com>. You will see the following screen. Click on “My Yahoo!” found to the right of the title:

Next, click on “Sign Up” found near the top of the screen:

Step 1: Create Your Yahoo ID and Password

When you click on “Sign Up”, you will be taken to a page that requires quite a bit of information. The first section is “Create Your Yahoo ID.”

Here you will need to enter your first name and your last name. Then you will have to choose your preferred continent and your gender.

Now it is time to choose your Yahoo ID, which will also be your Yahoo email.

Please note that your Yahoo ID may contain only letters, numbers, and the underscore. No dashes or other punctuation may be used.

Once you have chosen your Yahoo ID, you can press the “Check the Availability of This ID” button. As with Blogger, the name you want may not be available. If not, then simply choose another. If it is, go on to the next field.

Next you will need to create a password. The password needs to be at least 6 characters and IS case sensitive. Once you have chosen a password, you will need to retype it.

Be sure to check the box “Create my free Yahoo! email address.

The screenshot shows the 'Create Your Yahoo! ID' registration form. At the top left is the 'MY YAHOO!' logo, and at the top right is a link for 'Yahoo! - Help'. Below the logo is a box with a play button icon and the text 'Already have an ID or a Yahoo! Mail address? [Sign In.](#)'. A note below this box states 'Fields marked with an asterisk * are required.' The form itself is titled 'Create Your Yahoo! ID' and contains the following fields and options:

- * First name: Text input field containing 'John'.
- * Last name: Text input field containing 'Doe'.
- * Preferred content: Dropdown menu set to 'Yahoo! U.S.' with a help icon.
- * Gender: Dropdown menu set to 'Male'.
- * Yahoo! ID: Text input field containing 'sampleblogandping'. Below it is a note: 'ID may consist of a-z, 0-9 and underscores.' and a button labeled 'Check Availability of This ID'.
- * Password: Text input field containing six asterisks. Below it is a note: 'Six characters or more; capitalization matters!'.
- * Re-type password: Text input field containing six asterisks.
- Yahoo! Mail: A checked checkbox followed by the text 'Create my free Yahoo! email address.' and a note: 'Your address will be the ID you've chosen followed by @yahoo.com.'

Step 2: Security, Customization, Verification, and Terms of Service

You will need to select a security question, give your birth date and your ZIP code. This way, if you were to forget your password, Yahoo! would ask you to answer the questions so that they could let you back into your account. Be sure to tell the truth or you will forget the answers to the security question!

There is no need to customize your account. You can simply leave this section as it is.

Then you will need to verify your registration. Once again, you will type in the numbers and letters you see. In this way, Yahoo! keeps automated registrations from occurring.

If You Forget Your Password...

* Security question:

* Your answer:
Four characters or more. Make sure your answer is memorable for you but hard for others to guess!

* Birthday: , [?](#)

* ZIP/Postal code:

Alternate email: [?](#)

Customizing Yahoo!

Industry:

Title:

Specialization:

Verify Your Registration

* Enter the code shown: [More info](#)

This helps Yahoo! prevent automated registrations.

Finally, you will be asked to read and agree to the Terms of Service. We have placed Yahoo's Terms of Service in the Appendix for your convenience.

Terms of Service

Please review the following terms and indicate your agreement below. [Printable Version](#) 

1. ACCEPTANCE OF TERMS
Yahoo! Inc. ("Yahoo!") welcomes you. Yahoo! provides its service to you, subject to the following Terms of Service ("TOS"), which may be updated by us from time to time without notice to

By clicking "I Agree" you agree and consent to (a) the Yahoo! [Terms of Service](#) and [Privacy Policy](#), and (b) receive required notices from Yahoo! electronically.

Copyright © 2005 Yahoo! Inc. All rights reserved. [Copyright/IP Policy](#) [Terms of Service](#)
NOTICE: We collect personal information on this site.
To learn more about how we use your information, see our [Privacy Policy](#)

Once you click on "I Agree.". Now it is time to link your Blog to your Yahoo account!

Chapter 4 – Yahoo and Your Blog RSS Feed

What Is An RSS Feed?

How and why RSS works is rather technical, but that shouldn't worry you at all because you don't need to know the technical side to get it to work for you. Short for *RDF Site Summary* or *Rich Site Summary*, RSS is an XML format for sharing of content among different Web sites.

A Web site that wants to allow other sites to publish some of its content creates an RSS document and registers the document with an RSS publisher. Luckily for you, blogs have this built right into their system. That means that your content can be seen by people who subscribe to RSS readers like Bloglines, Yahoo, or MSN. And this is what gets your website noticed and indexed by major search engines.

Why Use the Yahoo RSS Feed?

You will want to create a MyYahoo account because Yahoo allows you to subscribe to your OWN blog RSS feed. This means that you can get Yahoo's spiders looking at your blog immediately. All you have to do is subscribe to your own blog and Yahoo will visit and index your blog for free!

Subscribing to Your Blog

After you have registered for your free MyYahoo! account, you will come to the following page:

The screenshot shows the MyYahoo! registration completion page. At the top left is the 'MY YAHOO!' logo, and at the top right is a link for 'Yahoo! - Help'. The main heading reads 'Registration Completed: Welcome sampleblogandping!'. Below this, there are three main sections:

- Confirmation Message:** A green checkmark icon is followed by the text: 'A confirmation message has been sent to the Email Address you provided. Please read the email and follow the instructions to fully activate your account. We also recommend that you [print out this page](#) for future reference.' To the right of this text is a box containing account details: 'Your Yahoo! ID: sampleblogandping', 'Your Yahoo! Mail Address: sampleblogandping@yahoo.com', and 'Your Alternate Email: blogandping@hotmail.com'.
- Security Information:** A green checkmark icon is followed by the text: 'If you forget your password you will be asked for the following information.' To the right is a table of security details:

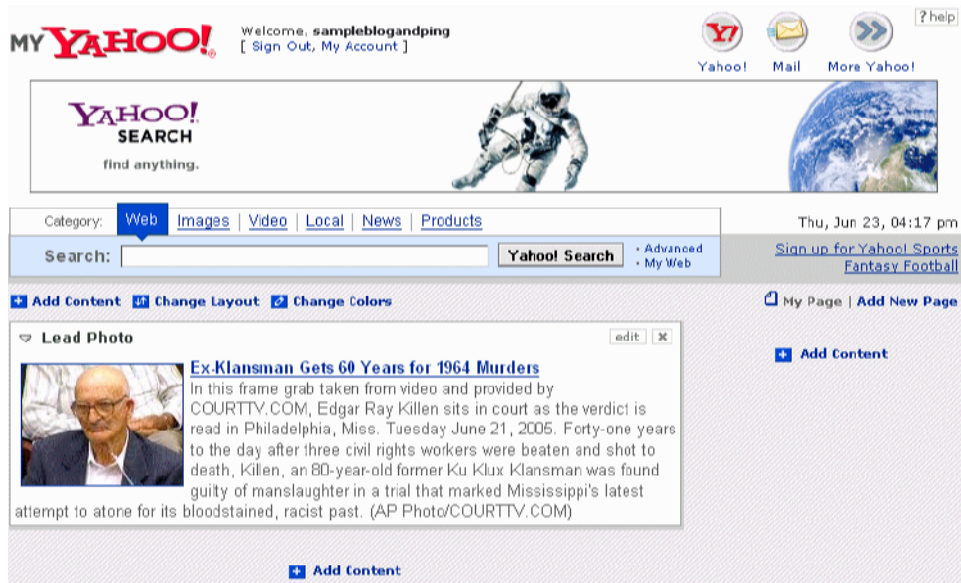

Security Question: What is your pets name?	Date of Birth: January 01, 1919
Your Answer: Spot	ZIP/Postal Code: 44709
- Marketing Preferences:** A green checkmark icon is followed by the text: 'Your Marketing Preferences: Select and customize the categories of communications you receive about Yahoo! Products and services. You can also choose to opt-out of each. [Edit Marketing Preferences](#)'.

At the bottom right of the page is a button labeled 'Continue to My Yahoo!'.

You may want to print/screen capture this page for your records. Once you have this information saved, press on the “Continue to My Yahoo!” button.

This will take you to your own personal Yahoo landing page. You can personalize this page in any way you choose. For the purposes of blogging and pinging, you do not need to worry about anything except signing up for your blogs.

To register for your blog, the first thing you have to do is click the “Add Content” button at the bottom of the landing page.

Doing so brings you to a page that allows you to add content in various ways. You will see a large, blue “Find Content” field. Next to the “Find” button, you will see a link called “Add RSS by URL. Click on this link so that you will be able to add your blog’s Site Feed URL.

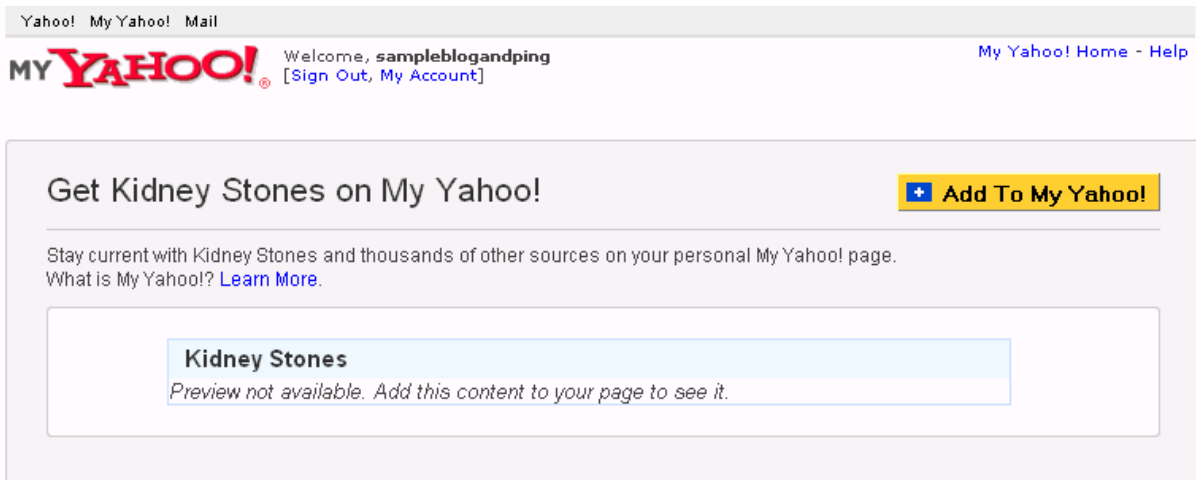

WARNING: This is not your blog’s URL but the SITE FEED URL. Your site feed URL will have atom.xml at the end. If you place the wrong URL in this field, the system will not work. In Chapter 2, Step 6, you were told how to find your site feed URL.

In the following example, the BLOG URL is <http://kidney-stones.blogspot.com> and the SITE FEED URL is <http://kidney-stones.blogspot.com/atom.xml>.

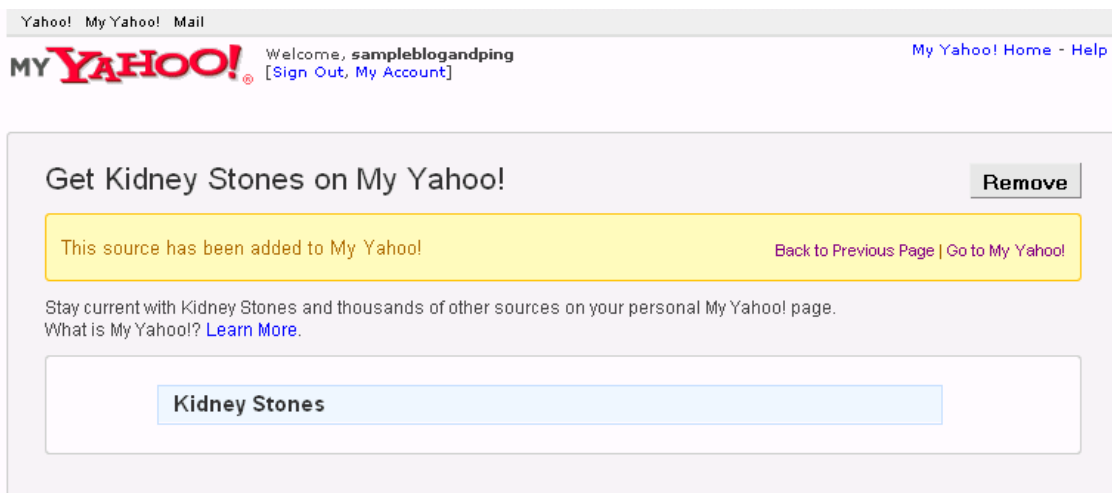

Once you have added your site feed URL, click on the “add” button.

Yahoo then does a quick search to see if there really is a blog with this RSS URL. Remember earlier when you had to create a test post (Chapter 1, Step 5)? That test post allows your blog to be “active” so that when Yahoo does this search they will find your blog. You will get a screen that looks like the following:

Now you will need to click on the “Add To My Yahoo!” button. You should then see a page like the following:

If you put in the wrong URL or have not created a test post, you will see the following screen:

 **We couldn't find the RSS file you asked for**
http://kiney-stones.blogspot.com/atom.xml

Suggestions:

- If you got here by clicking on an "Add to My" button, please notify the referring site's webmaster.
- If you entered the URL yourself, please check that the URL is correct and points to a valid RSS file.

(Look closely and you will see that the site feed URL is not correct because the spelling of the word kidney is incorrect.)

Once you have your site feed URL accepted, click on the "MyYahoo! Home" link. When you scroll to the bottom of your Yahoo page, you will now see that Kidney Stones is listed.

The screenshot shows a Yahoo! My Yahoo! page. At the top, there is a navigation bar with "Yahoo! My Yahoo! Mail" and a welcome message for "sampleblogandping". Below this is a Friskies advertisement. The main content area has a search bar with "Search:" and a "Yahoo! Search" button. To the right of the search bar, there are links for "Advanced" and "My Web". Below the search bar, there are links for "Add Content", "Change Layout", and "Change Colors". The main content area displays a "Lead Photo" section with a photo of Edgar Ray Killen and a headline "Ex-Klansman Gets 60 Years for 1964 Murders". Below this, there is a section for "Kidney Stones - no articles in the past 3 days".

Let's review quickly. You now have:

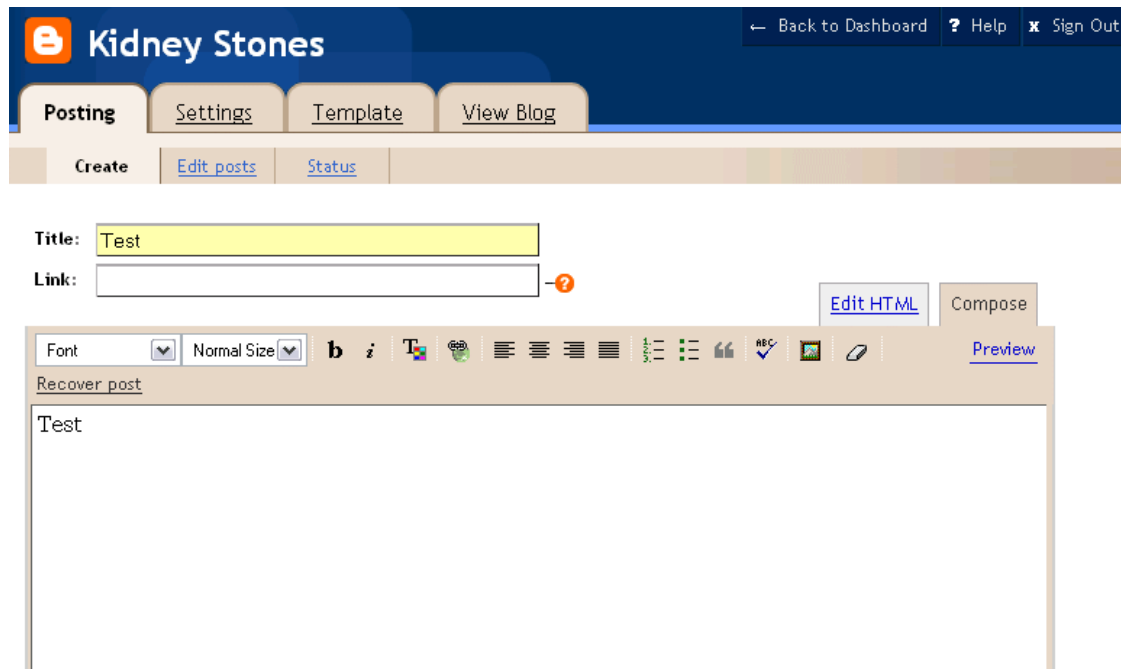

1. A Blogger account and at least one blog.
2. A MyYahoo account
3. MyYahoo RSS feed link to your blog

Now comes the fun part. It is time to start adding content to your blog! Chapter 5 will show you how!

Chapter 5 – Blog This!

What is BlogThis!?

Earlier, you learned how to create a very simple post. Let's look again at that page as a refresher:

First you put in the title and then you added the body. In order for blog and ping to work, you will also need to add a link. If you had to do this all by hand, it would take some time, but Blogger.com has made this fast and easy with the “BlogThis!” tool.

With BlogThis! you can easily make a blog post without ever having to visit Blogger.com.

BlogThis! creates your title, adds your link, and adds any highlighted content. If you wish to add more content, you can do so. Then, with a couple of simple clicks, you have a new post on your blog. It is as easy as that!

Installing BlogThis!

There are two ways to use BlogThis!: if you use Windows and Internet Explorer, you can use BlogThis! straight from the Google Toolbar. You can install Google Toolbar by going to http://toolbar.google.com/index_2.

If you're on another browser, just drag the link below to your browser's Link bar.

<http://help.blogger.com/bin/answer.py?answer=152&query=>

Once you have BlogThis! installed, try clicking on the icon. You will get a small screen that looks like this:

The upper right hand corner has a listing of each one of your blogs. When you use BlogThis! correctly, all of the fields will be filled in automatically.

Using BlogThis!

Using BlogThis! is as easy as installing it!

The first thing you need to do is go to the website you wish to get indexed. In this example, I am wanting to index my website about commodities investing and will be using my commodities investing blog as a way to do this quickly.

Ideally, your website will have many different pages. For many of you, you have been creating pages using Traffic Equalizer or Traffic Generator. The key here is to blog from different pages each time.

Go to one of your pages and highlight an area of text. You do this by running the mouse over the text with the left mouse button held down.

For the typical blog and ping method, your blog will only be visited by spiders and not by real people, so the text you highlight is not important. (For those that want to use their blog as a website or other business tool as well, you will want to read Chapter 8 to learn how to make your blog acceptable for people and not just bots.)

The screenshot shows a website with a navigation bar at the top containing links for Elance, Groups, AdSense, Constant Content, BlogThis!, and FineTuning. On the right side of the navigation bar are links for HOME and CONTACT US. The main header features a large red banner with the text "Commodity Investing Information" in yellow, flanked by a dollar sign icon on the left and an image of money on the right. Below the banner, there are three main content areas: 1) "Articles" on the left with links for "Why Commodities", "The Basics", "Gold and Silver", and "Strategies". 2) A central yellow box containing three paragraphs of text about commodities: "Commodities are bulk goods such as grains, metals, livestock, oil, cotton, coffee, sugar and cocoa. They can be sold either on the spot market for immediate delivery or on the commodities exchanges for later delivery. Trade on the exchanges is in the form of futures contracts. Commodities are often viewed as a hedge against inflation because their price rises with the consumer price index." "The modern commodity markets began long ago with the trading of farm products. Cattle, corn, pigs and wheat were widely traded in the U.S. in the 19th century, but other foods (such as soybeans) were added more recently." "Commodity markets are believed to have started in the ancient Iraq civilization of Sumer, where small baked clay tokens in the shape of goats or sheep were used in trade. A number of tokens sealed in a clay". 3) "VIP Resources" on the right, which includes an "Ads by Google" section with two advertisements: "Learn Commodities Trading" from www.TradingAcademy.com/ and "Internet Futures Broker" from www.expressfutures.com. Below these is a section titled "Informed People Get".

Next, just click on the BlogThis! link that is either in your Google toolbar or that you added earlier.

You will see that a title has been placed in the title field and a URL has been placed in the URL field. Additionally, you will see the text that had been highlighted in the website is now in the body of the blog. You will also see a URL link in the body text.

Having links in both the URL field and the body will help you get indexed more quickly.

Now you have to determine which blog you are adding content to. In this case, the material is for the Commodity Investing blog, so you would click on the expand arrow and then click on Commodity Investing. BlogThis! will refresh quickly and then you post by clicking on the Publish button in the upper right hand corner.

You will then see a “Done” page that shows which blog you have posted to. Now that you have fresh content, it is time to ping!

Chapter 6: Pinging Yahoo

Pinging – The Next Step

Search engines love changing content and therefore WANT to visit a site when it is updated. Blogs are a great way of offering this changing content, especially since they have a “pinging” feature.

In Chapter 2, Step 2, you set up your blog to automatically notify Weblogs.com of any changes. This means that each time you change your blog, a message is sent out for search engines to come and visit.

In addition to letting Weblogs do the work, there are a few other things you can do to create more “interest” in your blog. One of them is to Ping Yahoo.

Step 1: Changing the Code

The first thing you need to do is to go to the blog you want to ping and then add it to your bookmarks or favorites.

Once it is in your favorites or bookmarks, open the list and right click on the blog name.

For instance, in the example here, I saved Commodities Investing in my bookmarks.

Then I right click on Commodities Investing in the list.

This will bring up a list of different actions. At the bottom of the list is “properties.” Left click on properties and you will see the following screen:

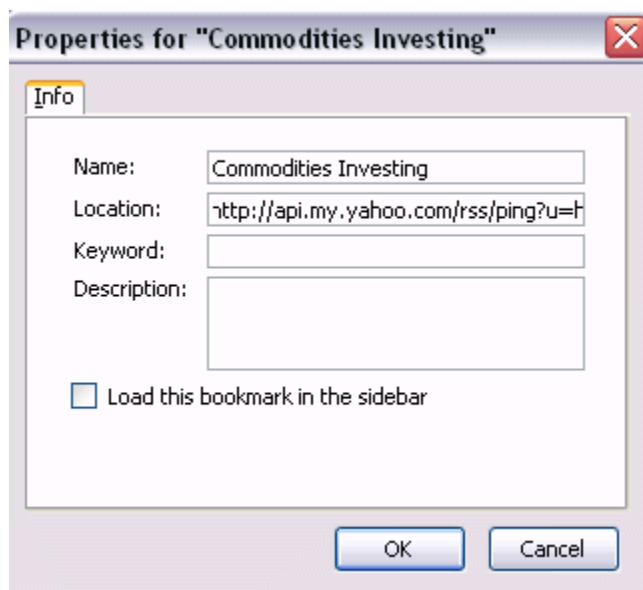

Now, if you were to “ping” with the properties as they are, the blogging/pinging would not be effective. This is one of the “secret” steps that took a long time to figure out. For

the blogging and pinging to work effectively, you are going to have to change the location field.

Currently, the location field has your URL. You need to add a string of text BEFORE this URL. Here is the string of text that you need to add:

`http://api.my.yahoo.com/rss/ping?u=`

So in the case of the example above, the old location was <http://www.commodity-investing.info>. The new location is:

`http://api.my.yahoo.com/rss/ping?u=http://www.commodity-investing.info.`

Let's take another example because this is VERY important to get correct. If your location URL is currently: <http://name-of-blog.blogspot.com>, the new location will be <http://api.my.yahoo.com/rss/ping?u=http://name-of-blog.blogspot.com>.

Step 2: Creating a Yahoo Ping

Now that you have the location correct, it is time to ping Yahoo. To do this, you just click on the bookmarked or favorites link.

If the ping worked correctly, you will see a page like the following:

It shows that a ping was sent out to <http://www.commodity-investing.info>. If you had pinged the kidney stones site, it would say Refresh requested: <http://kidney-stones.blogspot.com>. The ping message will not show the new location code but the ACTUAL URL for the blog you have pinged.

To prove that Yahoo pinged the blog, you can go back to your Yahoo home page. Go down to the bottom of the page where you registered your blog earlier. You should see the latest post under the blog.

Now both Weblogs.com and Yahoo have received info that your blog has new, updated information. Let's look at ways to get other search engines aware of your fresh content.

Chapter 7: Pinging Other Search Engines

Creating a Technorati Ping

There are a number of services designed specifically for tracking blogs. By sending a small ping to each service you let them know you've updated so they can come check you out.

One such service is Technorati. Technorati is a real-time search engine that keeps track of what is going on in the world of blogs. Technorati automatically receives notification from blogs as soon as they are updated. This means that it can track the thousands of updates per hour that occur. To get your blog listed on Technorati, go to <http://www.technorati.com/>.

Currently tracking 11.7 million sites and 1.2 billion links. [Site Feedback](#) [Sign Up!](#) Already a member? [Sig](#)

Technorati Blog

Live 8 Blog Central launches!
Add your voice: Listen, think, blog. live8.technorati.com.
[More »](#)

Scan down the page until you get to the “Your Blogs” section. Now, add your blog’s URL. Please note that this is not the LOCATION code from the Yahoo ping, nor is it the RSS feed URL. This is your blog’s actual URL.

Once you have added the URL, click on the “Claim this weblog” button. The final step is actually “claiming” your blog. The easiest way to do this is to follow the “Profile Link” method shown at the bottom of the page.

Claiming: <http://kidney-stones.blogspot.com>

Claiming your blog lets Technorati know that you own that site. Then we can give you special control of how your blog is presented in Technorati, as well as an easy way to add features to your blog! Claim your blog with one of the methods below.

» Technorati Embed

This is the preferred method. Just add the Embed Code at right to your blog’s homepage template, perhaps in a nice sidebar. Claiming your blog this way will enable special features, like a “search this blog” box, “blogs that link here” link, and profile information. You can customize or remove at any time.

Embed Code

```
<script type="text/javascript"
src="http://technorati.com/embed/uynih73e
</script>
```

Once this code is on your site, let us know by pinging Technorati!

[PING TECHNORATI](#)

» Quick Claim

Your blog software supports discovery, so you can claim your blog by entering your blog software name and password. Note: This is not your Technorati name and password it’s **the name and password you use to log in to your blog software** (ie: Movable Type, Blogger, etc.). We respect your privacy. [Privacy Policy](#)

Blog Username

Blog Password

[QUICK CLAIM NOW](#)

>> Profile Link

If you can't edit your blog's templates, then this is the claim method for you! Just post the Profile link at right to your blog, using whatever means you use to post to your blog. This will create a link to your Technorati Profile on your blog. We use this to determine that you are the blog owner.

Embed Code

```
<a href="http://www.technorati.com/claim/uynrel="me">Technorati Profile</a>
```

Once this code is on your site, let us know by pinging Technorati!

[PING TECHNORATI](#)

Highlight the code found in the "Profile Link" box. Now, go to your blog and create a post. Put the code into the body of the post. You do not need to worry about adding a title or adding a link. Publish the new post.

The screenshot shows the WordPress dashboard for a blog titled "Kidney Stones". The top navigation bar includes "Back to Dashboard", "Help", and "Sign Out". Below the navigation are tabs for "Posting", "Settings", "Template", and "View Blog". Under the "Posting" tab, there are buttons for "Create", "Edit posts", and "Status".

The "Create" button is selected, leading to a form for creating a new post. The "Title" field contains "technorati.com" and is highlighted in yellow. The "Link" field is empty. To the right of the "Link" field is a question mark icon. There are "Edit HTML" and "Compose" buttons. Below the form is a rich text editor toolbar with options for "Font", "Normal Size", bold, italic, text color, background color, bulleted list, numbered list, link, unlink, ABC, and a preview icon. The "Preview" button is also visible.

The main content area of the editor shows the following HTML code:

```
<a href="http://www.technorati.com/claim/uynih73eqw" rel="me" >Technorati Profile</a >
```

Now click the “PING TECHNORATI” button in the “Profile Link” method. You will receive this message:

Ping Received

Technorati has been notified that "kidney-stones.blogspot.com" has been updated. Thanks for letting us know.

You can bookmark this page and return to it when you update to notify Technorati of new content.

You can also use Technorati's XML-RPC interface to automate this process and ping from within your weblog software. Enter <http://rpc.technorati.com/rpc/ping> into your weblog tool's configuration for Pings and Notifications. Check our [ping configuration page](#) for more information.

Although this is not difficult, it can be time consuming.

Imagine that you have several new blogs and you have to follow this routine for each one of them.

Additionally, Technorati is not the ONLY blog search engine out there so you would have to repeat a similar process several times for each blog. Keeping track of all those and hitting each one whenever you update would be a hassle. OR you can use a site like Ping-O-Matic.

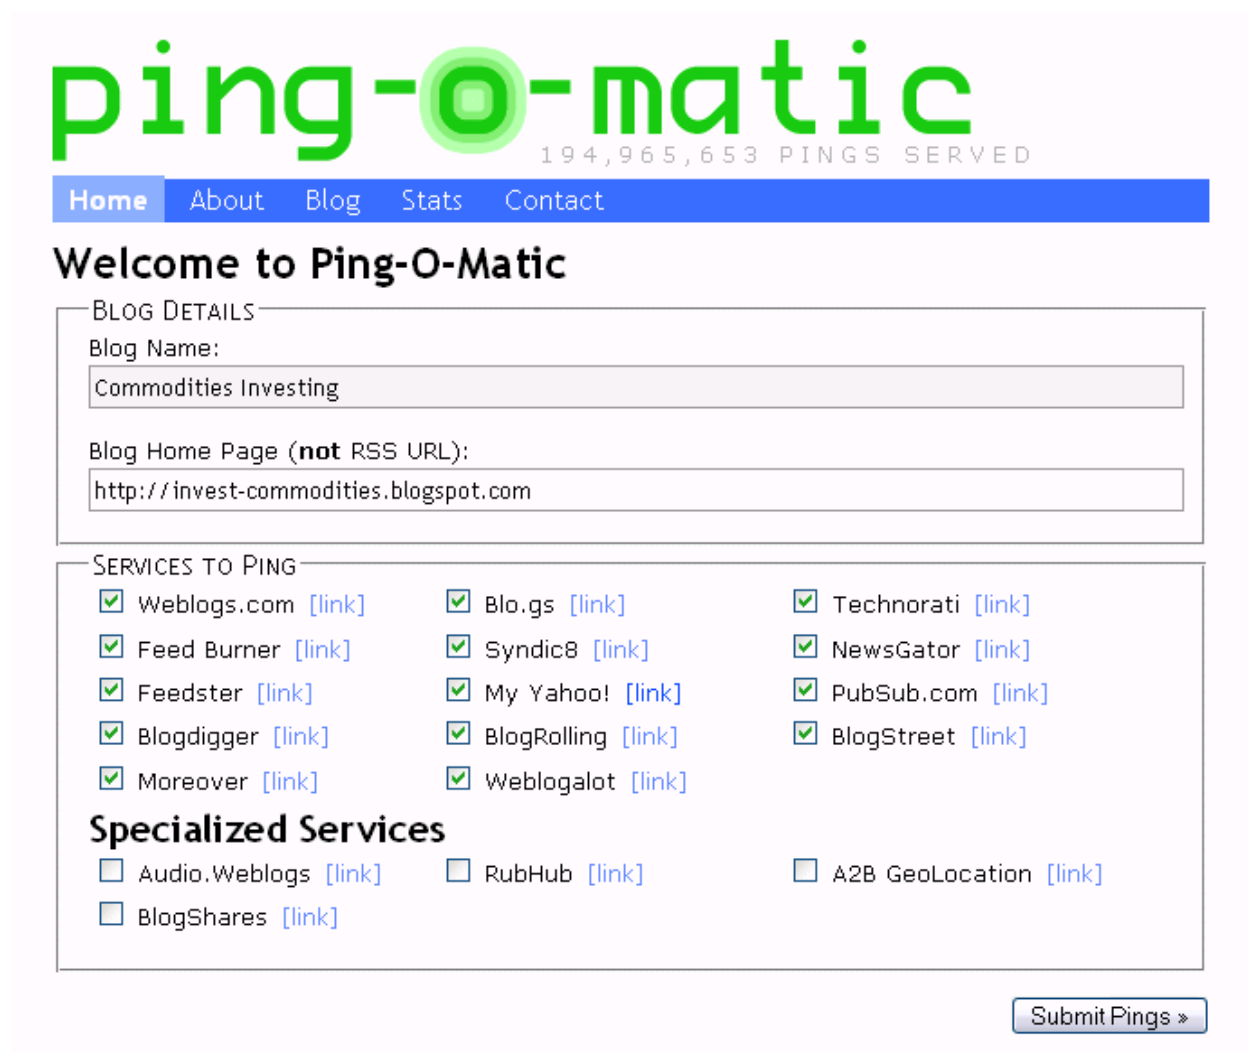

Using Ping-O-Matic

Ping-O-Matic is a service that let's you ping Technorati, and several other search engines!! These search engines include:

- Weblogs.com (not really necessary since you will be using Blogger.com and they automatically ping weblogs)
- Feed Burner
- Feedster
- Blogdigger
- Moreover
- Blo.gs
- Syndic8
- My Yahoo! (Not necessary because you will be pinging My Yahoo on your own. Although you can rely on Ping-o-Matic to do this for you, pinging Yahoo by yourself is a faster and better process.)
- Blogrolling
- Weblogalot
- Technorati
- NewsGator
- PubSub.com
- Blogstreet

Go to <http://www.pingomatic.com>.

You will need to fill out two fields – the Blog Name and the Blog Home Page. Once again, the URL needed is the actual URL and not the RSS or Location URL. Then click on “Submit Pings.”

[Home](#) [About](#) [Blog](#) [Stats](#) [Contact](#)

Ping-o-Matic results...

Pinged services with [Commodities Investing](#) ...

Hey! [Bookmark this page](#) and come back to it later to automatically re-ping.

How Do You Know If It Is Working?

The purpose of the blogging and pinging, as we have been doing it, is not to get your blog spidered, but to get your website spidered. So, before you really get started, I want you to go to <http://www.google.com>.

In the field, put the following information:

allinurl:+yourwebsite.com

If your site has not yet been spidered, you will get a message that there were no results.

Wait about 48 hours after creating your blog and starting the blog and ping process and put the same code into the Google field. Now you should see something like this:

The screenshot shows a Google search interface. At the top left is the Google logo. To its right are navigation links: Web, Images, Groups, News, Froogle, Local, and more ». Below these is a search input field containing the text 'allinurl:+www.kidney-stones.net'. To the right of the input field is a 'Search' button and two links: 'Advanced Search' and 'Preferences'. Below the search bar is a blue header bar with the word 'Web' on the left and 'Results 1 - 1 of 1 for allinurl:+www.kidney-stones.net. (0.20 seconds)' on the right. Under the 'Web' header, there is a link to 'www.kidney-stones.net/' and a link for 'Similar pages'. On the right side of the search results, there is a 'Sponsored Links' section containing four advertisements: 'Chronic Kidney Disease' with a description and the URL 'www.davita.com'; 'Fast Kidney Stone Relief' with a description and the URL 'www.Uriflow.com'; 'Got Kidney Questions?' with a description and the URL 'www.kidneyfund.org'; and 'Kidney Stones Home Remedy' with a description and the URL 'www.kidneyfund.org'.

Instead of nothing being found, Google has found one page.

Try this again in a few more days, and you are likely to see something like this:

Web [Images](#) [Groups](#) [News](#) [Froogle](#) [Local](#) [more »](#)

That's right, 4990 pages have been spidered! And in under a week!

Chapter 8: Using Business Blogs Instead of Websites

Blogs Vs. Websites For Small Business

Up to now, we've been assuming that you are using your blog to get one of your web sites spidered. Another way to use the blog and ping method is to try to get your blog spidered in its own right!

Why are blogs better than the traditional website? You have the ability to communicate one-on-one with customers in a casual way, and you can respond to timely events and maintain that community interaction on a weekly, or even daily basis. Plus:

1. Each blog entry is shown in chronological order on a blog's homepage but, each entry is in reality its own web page, with its own unique URL and title. So, an active blogger can create hundreds of keyword rich web pages in a matter of months.
2. The typical small business web site is lucky to receive an update several times a year. Search engines like change. So, if you change your blog several times a week, you will constantly be updated in the search engines.
3. Links from other high quality blogs will send traffic and get your blog and web site noticed.

Regardless of the type of business or the goals of the site, it's clear that with little investment small business blogging brings big returns. It's a great tool for any business.

Your Business Blog's Name and URL Matter

If you are blogging and pinged to get a website spidered, the name and address you choose for your blog is not terribly important. However, if you are using your blog as your main site, the name definitely matters – A LOT!

You will want to use keywords for both your title and your address. In fact, here is a little tip: you may eventually want to add Google AdSense to your site so it is better to pick a name that will place the right ads on your site.

Finding the Right Key Words

In order to use keywords for your title and URL, you have to know what they are. Effective keyword research for blogs requires knowing your audience.

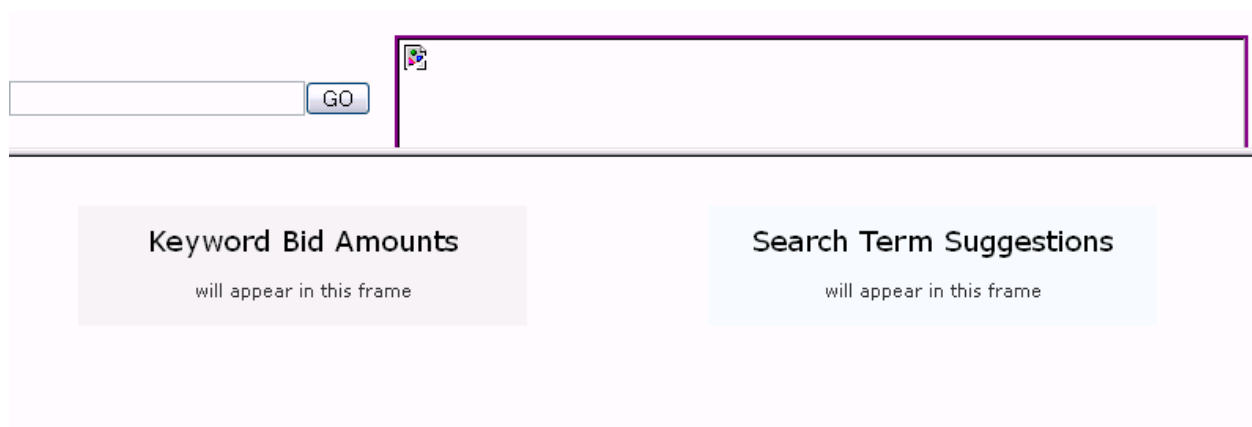

Before starting to develop the blog, you need to ask yourself the following questions:

- Who do I expect to read my blog?
- What do I expect them to get from it?
- What are my audience's "hot-button" keywords?

Answering these questions will help you create your keyword list. In fact, the answer to the last question will certainly provide a few keywords. Finding others is easier than you think. We will discuss two different tools in this section.

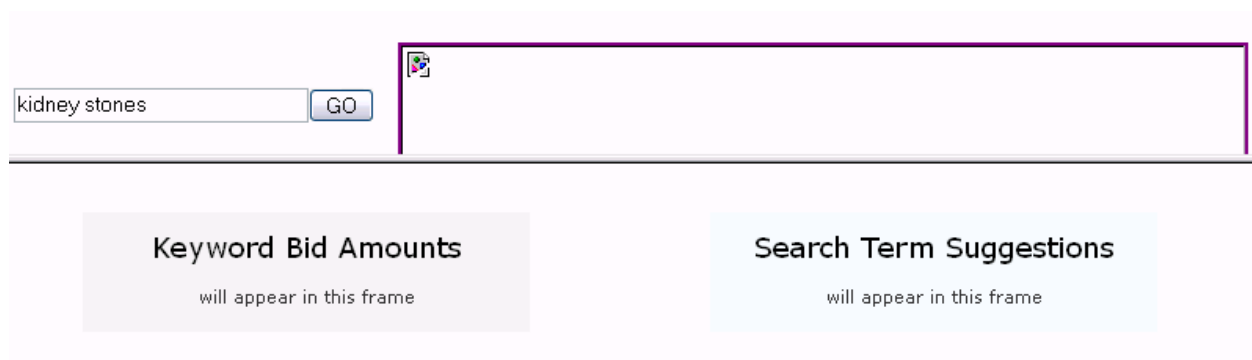

The first is Results Generator. Results Generator lets you know what words are being searched for on Overture.com. Start by going to

<http://www.resultsgenerator.com/overture/>. You will see the following screen:

The screenshot shows the Results Generator interface. At the top, there is a search input field with a "GO" button next to it. To the right of the input field is a large empty rectangular frame. Below the frame, there are two placeholder boxes: a light gray one on the left labeled "Keyword Bid Amounts" and a light blue one on the right labeled "Search Term Suggestions". Both boxes contain the text "will appear in this frame".

Next, put your main topic in the GO field and click on GO. In the example, I am looking for key words that have to do with the kidney stone blog.

The screenshot shows the Results Generator interface with the search input field containing the text "kidney stones" and the "GO" button. The large rectangular frame to the right is empty. Below the frame, the two placeholder boxes are the same as in the previous screenshot: "Keyword Bid Amounts" (light gray) and "Search Term Suggestions" (light blue), both containing the text "will appear in this frame".

The left column will show you how much people are paying for different words on Overture.com. Although interesting, this is not as important as what you will find in the right hand column. Here you will see all the related searches done in the past month and the exact words used for that search.

Keyword Selector Tool

Not sure what search terms to bid on?
Enter a term related to your site and we will show you:

- ◆ Related searches that include your term
- ◆ Estimated number of times that term was searched on last month

Get suggestions for: (may take up to 30 seconds)

Note: All suggested search terms are subject to our standard editorial review process.

Searches done in April 2005	
Count	Search Term
67405	kidney stones
10535	symptom of kidney stones
2350	cause of kidney stones
1991	kidney stone treatment
1420	picture of kidney stones
883	kidney stone diet
749	kidney stone sign and symptom

10. jessica simpson

When you access this page, you will want to click on the “Trial” tab at the top of the page. The trial works just like the paid version but does not give you nearly the number of words. However, to get a small keyword list started, the trial is quite valuable.

To get the free trial, you need to put in your name and your email address and then click on “Start the Trial.”

Free Trial

We compile a database of terms that people search for. You enter some keywords, and we tell you how often people search for them, and also tell you how many competing sites use those keywords.

Please register for the Wordtracker trial. This will allow us to email you the results.

We have a very strict policy. The information you give us will never be abused or sold to a third party and we won't bombard you with hundreds of emails asking you to buy our product! Please read our [privacy policy](#) for further information.

Once you have entered your details, the free trial will begin immediately. Please complete all four steps in order to fully appreciate the Wordtracker keyword system.

Please register for the trial:

Your name:

sampleblogandping

Your email address:

blogandping@hotmail.com

Start the trial (launches in new window)

This brings you to a welcome page and again, you have to click on the Start the Trial arrow.

Hi sampleblogandping,

Welcome to the Wordtracker trial!

Your aim is to discover frequently used keywords with **little or no competition**. Use them to generate traffic to your website.

This process has four easy steps and takes about 5 minutes to complete.

IMPORTANT If you are having problems, you might find it easier to download and read the tutorial first. Please click [here](#) for more information.

1. You enter a term that describes your business or service. We'll find you as many related keywords as possible.
2. You'll find out whether people actually search for these keywords.
3. E-mail, print or refine your selection.
4. Find out how many other people are competing for your keywords in Altavista.

Click here to start the trial 

That brings you to Step 1. Add your topic to the field and click on proceed.

Wordtracker
Webmaster Keywords

Click here

Step 1

Finds hundreds of related keywords.

Enter a term (two or three words) that describes your business or service. Eg. 'golfing equipment', 'real estate' or 'search engine positioning'. Anything you don't understand, please click on the question marks.

kidney stones

Lateral Thesaurus ?

Proceed >>

Keywords in basket: 0 / 30
Clear All

You will see the following screen while you wait:

In 30 seconds, related keywords will appear below.

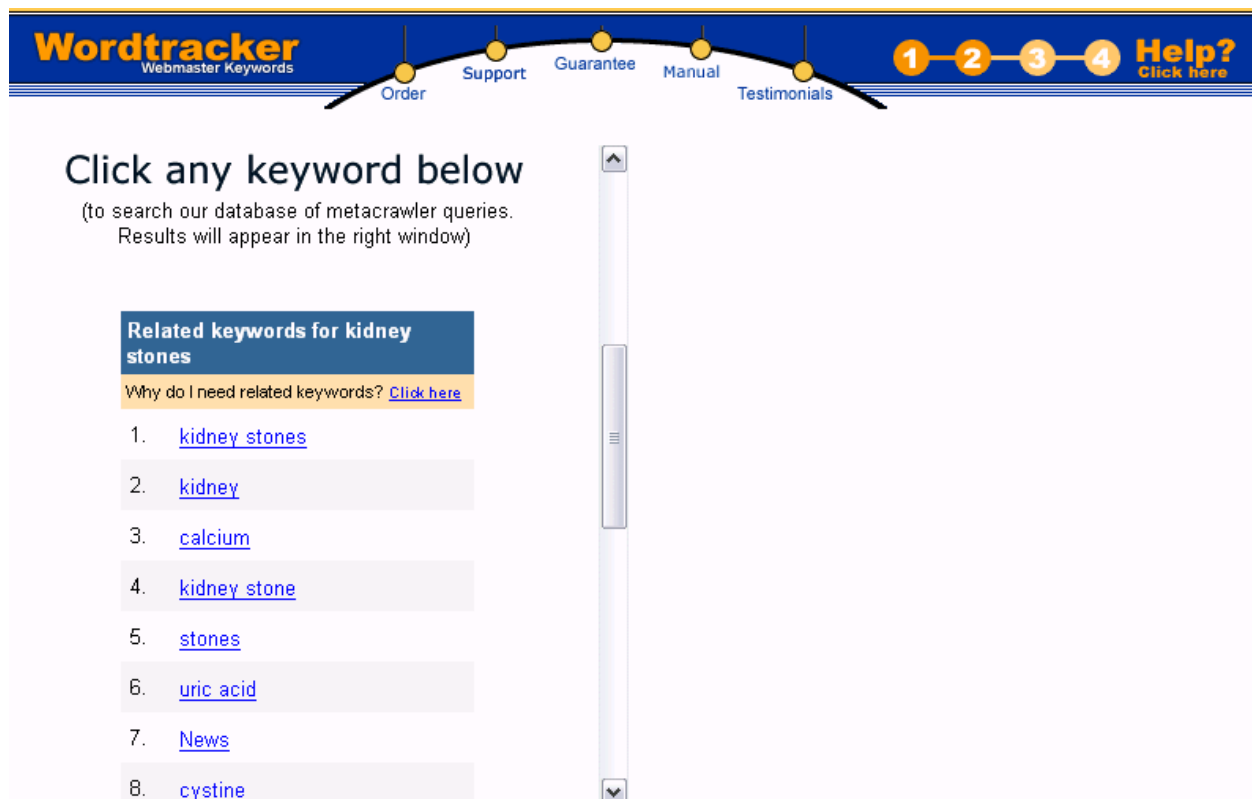

*These keyword suggestions are being extracted from 200 related web pages across the internet.

Finished! Please scroll down...

Step 2

Now you come to “their” Step 2. However, before you do their next step, take a look at the related keywords and see if any of these should be added to your list. For instance, you will want both kidney stones and kidney stone, and you probably want uric acid and cystine.

Now you can click on one of the keywords. I suggest you start with the first one since it is usually more closely related.

The screenshot shows the Wordtracker website interface. At the top, there is a navigation bar with the logo "Wordtracker Webmaster Keywords" and several menu items: "Order", "Support", "Guarantee", "Manual", and "Testimonials". On the right side of the navigation bar, there are four numbered steps (1, 2, 3, 4) and a "Help? Click here" link.

Below the navigation bar, the main content area is titled "Click any keyword below" with a subtext "(to search our database of metacrawler queries. Results will appear in the right window)".

Underneath this title, there is a section titled "Related keywords for kidney stones". Below this title, there is a link: "Why do I need related keywords? [Click here](#)".

The list of related keywords is as follows:

1. [kidney stones](#)
2. [kidney](#)
3. [calcium](#)
4. [kidney stone](#)
5. [stones](#)
6. [uric acid](#)
7. [News](#)
8. [cystine](#)

To the right of the list, there is a vertical scroll bar with a small window showing the results of the search.

When you click on the keyword, a list of words will appear in the right hand column. If you bought a membership to this site, you would get 300 words. With the trial, you only get 15.

Click any keyword below

(to search our database of metacrawler queries. Results will appear in the right window)

Related keywords for kidney stones

Why do I need related keywords? [Click here](#)

1. [kidney stones](#)
2. [kidney](#)
3. [calcium](#)
4. [kidney stone](#)
5. [stones](#)
6. [uric acid](#)
7. [News](#)
8. [cystine](#)

Click on keywords below to add to basket

Searching...100 row(s) returned

(taken from 373 million search queries over the last 60 days)

[Click here to add all keywords to your basket](#)

Keyword  explain	Count	Predict	Dir
kidney stones	2734	2340	
kidney stones in women	151	129	
kidney stones symptoms	116	99	
kidney stones treatment	115	98	
symptoms of kidney stones	83	71	
kidney stones information	37	32	
dissolve kidney stones	33	28	
passed kidney stones	33	28	

Take a look at this list and see if any of the keywords or phrases would be a good match to your topic.

Choosing a Title

Now that you have a good list of keywords, you will need to choose a title for your page.

Typically, this should be short and sweet and have the main keywords. For instance, with the kidney stone example, you might want the title:

- Kidney Stones
- Dissolve Kidney Stones
- Symptoms of Kidney Stones

- Etc

The key is to choose a title that will help you optimize your blog. Don't choose something like "Stones" because you will want to get traffic that has to do with kidney stones and not bricks!!

Creating a URL That Works

Now you want to create a URL. First, you want your URL to be keyword sensitive. Second, you want your URL to create Google AdSense Ads that match your content. Even if you are not planning to use Google AdSense, finding a URL that produces the right content will show you that your name is search engine friendly.

The way to check this is by going to <http://www.resultsgenerator.com/adsense/>

Place a potential URL in the field. You will want to put the entire URL into the field. This means that if you are using Blogger.com, your URL will be <http://yourblog.blogspot.com>

In the example, we are trying <http://kidney-stones.blogspot.com>.

It does not matter which variation of AdSense you choose – these are just design differences and will not create different ads.

Your Business Blog's Content

The content for a blog and ping type blog is relatively unimportant. All you need are the links to the site you want to have indexed. Why? Only spiders will ever see the blog.

However, when you are creating a blog for business purposes, you need to purposefully creating blog content that has your keywords. As a Business Blogger, you can make your blog more powerful by using keywords in your content.

Using keywords in the content will ensure that search engines find your blog. And if search engines find your blog, there is a better chance that people will read what you wrote. And if you can get them reading what you wrote, then those interested in your topic are ready to be captured by your product or service.

This approach may sound like too much trouble. But consider this: if you are going to go to the effort of creating and maintaining a blog (and they are a lot of work), then why not make sure that the blog is found on the search engines via the keywords most searched by your intended audience.

You can still use BlogThis! but you will want to add some of your own content to the blog body. Let's take a look at how to do this.

Assume that you have a business that is concerned with computer security and have a blog named Computer Security at <http://computer-security.blogspot.com>. As you were browsing the web, you came across the a good computer security article at <http://www.pcpro.co.uk/news/65700/security-company-warning-of-vulnerabilities-in-windows-xp-sp2.html> that will help you motivate people to switch over to Firefox instead of staying with Internet Explorer.

News [Security]

Friday 12th November 2004

Security company warning of vulnerabilities in Windows XP SP2 5:03PM

A US security company is warning that it has found ten 'serious' vulnerabilities in Windows XP systems with SP2 installed.

The company says it has passed on details of the flaws to Microsoft but won't reveal anything publicly. Recently, a security issue with iFrame in Internet Explorer that was made public before Microsoft had the chance to fix it. This led to a virus being unleashed before Windows users had the chance to patch their systems against it.

However, Finjan has published the scope of exploiting these flaws, saying that an successful attacker could 'silently' gain remote control of an SP2 machine when the target system is used to browse the Internet.

It says an attacker could exploit the vulnerabilities to access files stored on the target system, and switch privilege zones so that the attacker would have the same sort of access as if they were logged in sat in front of the PC. In addition an attacker could switch off warning systems added by SP2 that would alert a user if an executable file is being downloaded locally.

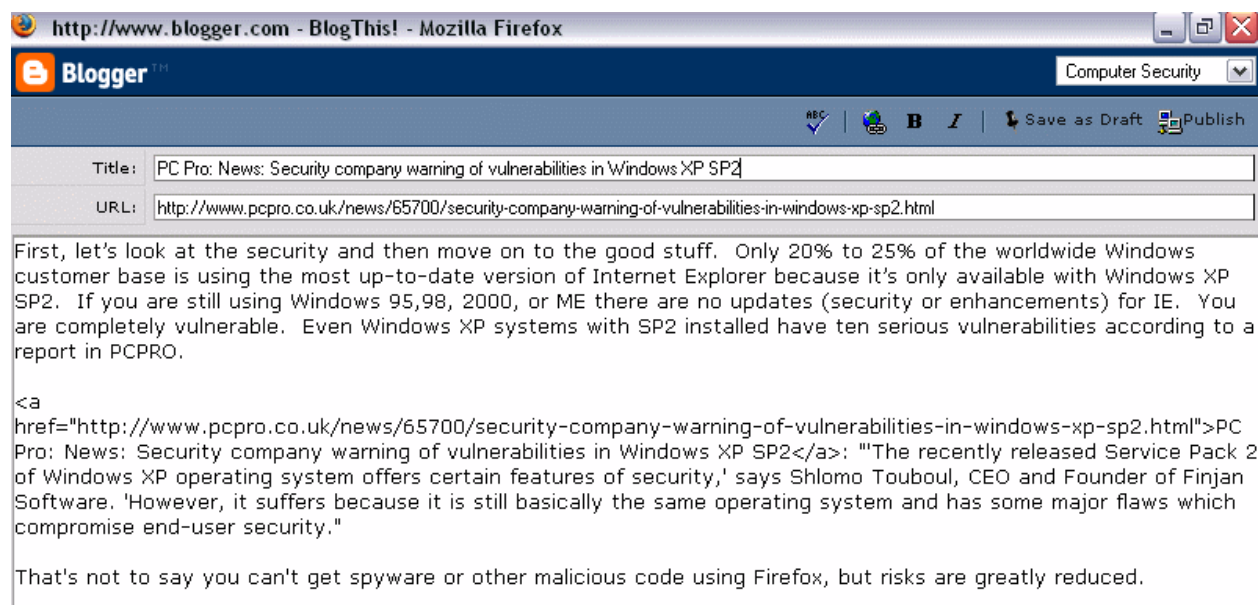

ADVERTISEMENT

The recently released Service Pack 2 of Windows XP operating system offers certain features of security,' says Shlomo Touboul, CEO and Founder of Finjan Software. 'However, it suffers because it is still basically the same operating system and has some major flaws which compromise end-user security.

You would highlight a particular section and then use BlogThis! just like in you were taught in Chapter 5.

Now it is time to add your own words. In this case, I added words both before and after the quote.

Don't forget to click on the list to get the correct blog before publishing. The blog will post will look like this:

MONDAY, JUNE 27, 2005

PC Pro: News: Security company warning of vulnerabilities in Windows XP SP2

First, let's look at the security and then move on to the good stuff. Only 20% to 25% of the worldwide Windows customer base is using the most up-to-date version of Internet Explorer because it's only available with Windows XP SP2. If you are still using Windows 95,98, 2000, or ME there are no updates (security or enhancements) for IE. You are completely vulnerable. Even Windows XP systems with SP2 installed have ten serious vulnerabilities according to a report in PCPRO.

PC Pro: News: Security company warning of vulnerabilities in Windows XP SP2: "The recently released Service Pack 2 of Windows XP operating system offers certain features of security,' says Shlomo Touboul, CEO and Founder of Finjan Software. 'However, it suffers because it is still basically the same operating system and has some major flaws which compromise end-user security."

That's not to say you can't get spyware or other malicious code using Firefox, but risks are greatly reduced.

[June 2005](#)

Take a look at the second paragraph. That is the BlogThis! paragraph. If you don't like the way the paragraph starts, you can make adjustments to the HTML. The HTML in the body of the post that shows the link to PCPRO is:

```
<a href="http://www.pcpro.co.uk/news/65700/security-company-warning-of-vulnerabilities-in-windows-xp-sp2.html">PC Pro: News: Security company warning of vulnerabilities in Windows XP SP2</a>
```

If you don't want your sentence to start with "PC Pro: News: Security company warning of vulnerabilities in Windows XP SP2" you can change the highlighted words to something else. For instance, you might want to say "A professional in the report states"

The HTML link would look like this:

```
<a href="http://www.pcproweb.com/news/65700/security-company-warning-of-vulnerabilities-in-windows-xp-sp2.html">A professional in the report states:</a>
```

In this way, the finished blog entry would look like this:

MONDAY, JUNE 27, 2005

PC Pro: News: Security company warning of vulnerabilities in Windows XP SP2

First, let's look at the security and then move on to the good stuff. Only 20% to 25% of the worldwide Windows customer base is using the most up-to-date version of Internet Explorer because it's only available with Windows XP SP2. If you are still using Windows 95, 98, 2000, or ME there are no updates (security or enhancements) for IE. You are completely vulnerable. Even Windows XP systems with SP2 installed have ten serious vulnerabilities according to a report in PCPRO.

Pinging Your Business Blog

Just like with blog and ping blogs, you will want to ping your business blog. Luckily, there is no difference at all!

- You will still want to create a MyYahoo! account, register your blog, and ping Yahoo whenever you add content.
- You will still want to ping Ping-o-Matic whenever you add content.

Additionally, you may want to add your blog to several other sites for submission. The Appendix has several of these listed for your convenience.

Chapter 9: Tips and Tricks

Tips For Blog and Ping Blogs

- If you want to cut and paste into your blog content field, but the “paste” is not available, simple press Control V.
- Make a commitment to blog everyday.
- Don't forget that the location code starts with **<http://api.my.yahoo.com/rss/ping?u=>** Mark this down. You can also store it on your clipboard for easy pasting.
- Remember that your RSS feed will end with **atom.xml**
- Use favorites or bookmarks. Instead of having to constantly remember the different URLs of your blogs, having to type in the ping codes, or remember the Ping-o-Matic URLs, create a folder in your favorites or bookmarks. I call my folder “Blog and Ping.” The Blog and Ping main folder has the following sub-folders:
 - **Needs to be Spidered:** Websites that you want to get spidered
 - **Blogs:** Blogs that you have created

- **Yahoo Ping:** The blogs with the altered location codes so that you can ping Yahoo every time you make a change
 - Ping-O-Matic: Pingomatic sites for each blog
 - Tools: Here I would have MyYahoo to be able to view the Yahoo pings, Blogger.com to be able to make easy changes to your blogs, and the Ping-o-matic home page in case you want to add more blogs to the site.
-
- Do a search on your site URL at Alexa.com and see if you are found. If not, your search will have triggered what it takes to be inside their database in the near future. <http://www.alex.com/>

Tips and Trick for Business Blogs

Use your primary keyword in your blog URL

Use your primary key phrase in the title of your posts.

Use your secondary keywords in the body of your post

Links pointing to your blog or posts are essential to build pagerank and make your blog rank higher in the search engine listings.

Update frequently

Once you create your blog, try to stick to the same domain and blog host or system for as long as you continue to publish. You could end up losing a lot of your traffic, your readers and all your search engine listings if you decide to move.

Before making any changes to the template, copy the original code to your clipboard. This way, if you make a mistake you can change it back easily.

Before saving template changes, click on the preview button to see if you like the changes you are making.

Changes to Your Business Blog Template

Change Editor

In the beginning, we set up your blog to say “editor” for each of your posts. In order to keyword optimize your blog, you will want to change “editor” to one of your keywords. To make these changes you have to go into the “Template” tab.

Change the Blogger NavBar

Blue

The Blogger NavBar is a navigation bar and toolbar with a form that allows people to search *just your weblog* using Google's SiteSearch and gives you the ability to check out what's happening on other recently published blogs with one click. This bar replaces the advertisements that used to be displayed at the top of some blogs.

```
<!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN" "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict">
<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" lang="en">
<head>
  <title><${BlogPageTitle}</title>
  <${BlogMetaData}</head>
```

Scroll down until you find the following HTML code:

```
<p class="post-footer">
```

```
  <em>posted by <${BlogItemAuthorNickname}> at <a
  ref="<${BlogItemPermalinkUrl}>" title="permanent
  link"><${BlogItemDateTime}></a></em>
```

Change the highlighted code to a name with one of your keywords, for instance, Computer Security Guru. The new code would look like this:

```
<p class="post-footer">
```

```
<em>posted by <${BlogItemAuthorNickname}> at <a ref="Computer Security  
Guru" title="permanent link"><${BlogItemDateTime}></a></em>
```

Save the Template changes and then republish. You will need to do this for each blog that you create.

Adding Links

The more links you have on your blog, the better. You can add pertinent links in the sidebar. Once again, go to the “Template” tab and scroll down until you see the following code:

```
<h2 class="sidebar-title">Links</h2>  
<ul>  
  <li><a href="http://news.google.com/">Google News</a></li>  
  <li><a href="http://EDITME">Edit-Me</a></li>  
  <li><a href="http://EDITME">Edit-Me</a></li>  
</ul>
```

This is the HTML code for the sidebar links. The yellow shaded code is the URL for the link. The green shaded code is what the person sees when visiting your blog. You will want the green code to be full of keywords.

For instance, if you are working with your Computer Security blog, you may want to link to <http://www.cert.org/homeusers/HomeComputerSecurity/>. To do this, you would change one of the yellow highlighted fields to <http://www.cert.org/homeusers/HomeComputerSecurity/> and then you would change the corresponding green field to something like Home Computer Security or any other combination of keywords.

The final code would be:

```
<li><a href="
http://www.cert.org/homeusers/HomeComputerSecurity/">Home
Computer Security </a></li>
```

You can create as many links as you like using this method. Once you are done creating links, be sure to save your changes and republish your blog.

The finished product would look like this:

COMPUTER SECURITY

MONDAY, JUNE 27, 2005

PC Pro: News: Security company warning of vulnerabilities in Windows XP SP2

First, let's look at the security and then move on to the good stuff. Only 20% to 25% of the worldwide Windows customer base is using the most up-to-date version of Internet Explorer because it's only available with Windows XP SP2. If you are still using Windows 95, 98, 2000, or ME there are no updates (security or enhancements) for IE. You are completely vulnerable. Even Windows XP systems with SP2 installed have ten serious vulnerabilities according to a report in PCPRO.

ABOUT ME

EDITOR

[VIEW MY COMPLETE PROFILE](#)

LINKS

[Home Computer Security](#)

[Computer Viruses](#)

[Spyware](#)

[Antivirus Software](#)

Change About Me

Looking at the sample above, you will see an "About Me" section in the right hand sidebar. You will want to change the "Editor" in the sidebar to reflect the same name that you use when posting. Go to the "Template" tab and scroll down until you find the following code:

```
<!-- Begin #profile-container -->
```

```
<$BlogMemberProfile$>
```

```
<!-- End #profile -->
```

Change the highlighted code to your posting name. In the case of this blog, it is Computer Security Guru.

```
<!-- Begin #profile-container -->
```

```
Computer Security Guru
```

```
<!-- End #profile -->
```

Save the template changes and republish.

Changes to Your Business Blog Settings

All the settings for a business blog are identical to the settings for a blog and ping blog.

However, you can add a description to your Business Blog that will help it be search engine optimized.

Go to the Settings Tab and then click on the sub-tab called Basic. Put in a description that uses your keywords. Then click on Save Settings and then on republish.

Appendix 2 – Weblog Providers

There are many other weblog providers besides Blogger.com. Here are just a few:

[DeadJournal](#)

This is a blogging provider for individuals who wish to belong to a community of bloggers with an "edge."

[LiveJournal](#)

This popular free blog host is preferred by many individuals who enjoy a community-based blogging system. It is web-based and the sign-up process is quick and easy.

There's also a premium version.

[Movable Type](#)

This is a popular blog software among bloggers who like to manipulate web designs, formats, and functions. However, you need to have some programming skills (or pay for an installation service) and your own web host. While there is a free version, some bloggers might find the licensing agreement on this too limiting. For more flexibility, there are several licensing fee options for both personal and commercial users.

[WordPress](#)

This free blog software is b2/cafeblog's official successor. It has a great interface and useful features like 'private' posting (password-protected), file uploads, and more. You

need PHP version 4.1 or greater, MySQL version 3.23.23 or greater, and The Apache mod_rewrite module (optional, for the nice URI functions) on your server.

[21Publish](#)

21Publish is a new paid blog service that is geared towards "cooperative publishing" (mainly for groups). It allows organizations to build their own blog portals. The fees vary, depending on the number of bloggers, expected usage, etc.

[b2](#)

A sleek and highly underrated weblog publishing tool. You need PHP4 (version 4.0.5 or higher), MySQL (version 3.23.23 or higher), and Perl (optional) to run this program on your server. This is a free blogging platform.

[Blog Drive](#)

This free blog host with a clean interface supports multiple blogs and authors, as well as built-in features like a tag board, commenting system, email notification, calendar, and archives. You just need to display a banner on your blog.

[Blog Easy](#)

Here's a simple blogging host with free and premium services available. The account has basic features like comments and archives. There are limited customizable features.

[Blog-City](#)

Basic blog features are available in the free version, like comments, archives and online administration. Blogs expire after a certain time if they're not used. The advertisement-free premium service contains more advanced features like RSS feeds, photo albums, BlogBoards, search, and more.

[Bloxom](#)

Bloxom (pronounced "blossom") is an open source web logging platform that runs on Perl. This is best for bloggers who seek a simple, 'minimalist' blogging software.

[Bravenet Journal](#)

One of the latest offerings of Bravenet, a web services company, is this blogging system. You just need to sign-up to start your own blog. There are some built-in functions like comments, mood indicator and a tag board. The free version contains several ads for Bravenet. To remove the ads, you need to pay a subscription fee.

[Diaryland](#)

The latest version of Diaryland offers two ways to share posts and stories: a one-entry-per-page view (original diary-type posts) and multiple-entries-per-page view (blog-type posts). This site is primarily for personal users.

[Geeklog](#)

It's a weblog platform that uses PHP4 and MySQL. Some of its features include messaging, comments, polls, and calendar, among others.

[JournalSpace](#)

Simple, feature-filled weblog hosting provider. It has moblogging, photo blogging, site feeds, audio blogging and other functions. It's free!

[ModBlog](#)

A free blogging software that caters to novices and advanced users alike. There are several features available including customization, built-in chatterbox, bulletin, profile, playlists, backups and a free 1 MB image storage. Users can pay fees for additional features (ads removal, more image storage space, etc.).

[Simple PHP Blog](#)

A stand-alone weblog platform that needs PHP 4 or greater.

[SquareSpace](#)

Sleek, powerful hosted weblog system. There's a free package, but more features are available for those who purchase either a personal or business license.

[tBlog](#)

A free blog tool with free blog templates and hosting. Just sign-up, design your theme, and start blogging. You can customize the look and feel of your site. And, unlike many free blog platforms/hosts, this one does not force you to display a banner on your blog.

[Text Pattern](#)

It is a simple content management system that can be used for web logs. It has a clean interface. It's donateware.

[UpSaid](#)

This host offers a free and premium service. The free service offers basic features like templates, counters, polls, and a guestbook. It has a clean, smooth look that can be easily customized.

[UserLand Software](#)

This is a Personal and Business web logging tool. Manila software is for business enterprises and Radio UserLand is for personal publishing. There are free trial copies available on the site. Both are available for a fee after the trial version expire.

Appendix 3 – Photo Blog Software

[Hello BloggerBot](#)

This is an enhancement photo blogging and peer-to-peer sharing software from Picasa.

It works with a Blogger.com weblog.

[SnapLog Photo Blog](#)

SnapLog Photo Blog is BETA software. A description of this tool from the site is as follows: *SnapLog is a Windows XP/2000/98 application that provides an easy interface to share photos on your website.*

[Zorpia](#)

This is an online social networking site with blogging and photo blogging features.

"Learn how to make a life-changing income of \$100,000 to \$250,000 with your Internet business... even if you're a computer dummy!"

Review: "The Insider Secrets to Marketing Your Business on the Internet" by Corey Rudl

I've just finished reading the brand-new 2005 version of Corey Rudl's top-selling Internet marketing system, "*The Insider Secrets To Marketing Your Business On The Internet*," and frankly, I'm overwhelmed by the huge amount of critical wealth-building information he's managed to pack into these **two hefty binders and 3 CDs!**

But I guess I shouldn't be surprised; after all, when the box containing these materials showed up at my door, it weighed in at **over 10 pounds!**

That's 10 pounds of the most comprehensive **marketing strategies, test results, case studies, tools, and ideas** for generating a life-changing income online (from \$1,000s to over \$1 million) you're ever likely to read!

[Click here](#) for a **FREE** preview.

I'm talking about information like...

- Step-by-step advice for starting your own Internet business **in as little as 48 hours!**
- How to build a top-selling web site... for less than \$100!
- Where to find hot products to sell (in 20 minutes or LESS)!
- 100s of FREE and cheap online tools, resources, and software
- How to get 1,000s of qualified NEW visitors to your web site... for FREE!
- How to **get #1 rankings in the search engines** and get tons of FREE traffic from the "Big Guys" like Google!
- Secrets to writing sales copy that can **increase sales by up to 400% (or MORE)!** And **much more!**

If you're unsure who Corey is, you should know that he's been a recognized expert in online marketing for a decade now. Not only has he generated **\$40,000,000 in online sales**, his sites also attract **450,000 visitor a week!**

What's *really* great about Corey is that he can show ANYONE how to have a **wildly profitable Internet business** (that takes just a few hours each day to run)...

... even if you're an absolute computer dummy!

And if you *already* have an Internet business, he can help YOU, too. The advanced sections of his system show you how you can **increase your sales by 400%... 700%... even as much as 1,000%!**

I give Corey's system the highest rating possible! Its 1,300+ pages of step-by-step lessons contain the exact SAME tested and proven fast-growth strategies he has personally used to generate over \$40 million in online sales -- *starting on a shoestring budget!*

And it's the SAME SYSTEM that literally **1,000s of his students have used** to drive "truckloads" of cash out of the Internet.

I strongly urge you to check out Corey's wealth-building system as soon as possible!
